

# Cisco IronPort C370 for Medium-Sized Enterprises and Satellite Offices

Medium-sized enterprises face the same daunting challenges as the Fortune 500 and Global 2000 - higher mail volumes and new, evolving threats. The Cisco IronPort® C370 Email Security Appliance is built on the foundation of the Cisco IronPort AsyncOS® operating system to provide power for today's mail volumes and high-performance scanning for tomorrow's threats. The Cisco IronPort C370 delivers industry-leading protection from inbound spam and virus attacks and outbound data loss possibilities, in an easy-to-use appliance.

Today's email-borne threats consist of virus attacks, spam, false positives, distributed denial-of-service (DDoS) attacks, spyware, phishing (fraud), regulatory compliance violations, and data loss. The Cisco IronPort C370 incorporates preventive and reactive security measures that are easy to deploy and manage.

## The Cisco IronPort Difference

Cisco IronPort email and web security products are high-performance, easy-to-use, and technically innovative solutions designed to secure organizations of all sizes. Built for security and deployed at the gateway to protect the world's most important networks, these products enable a powerful perimeter defense.

Using the Cisco® Security Intelligence Operations (SIO) center and global threat correlation makes the Cisco IronPort line of appliances smarter and faster. This advanced technology enables organizations to improve their security and transparently protect users from the latest Internet threats.

## Features

The Cisco IronPort C370 contains a powerful multilayered approach to email security - providing advanced threat prevention, blocking spam and viruses, and enabling corporate data loss prevention and remediation.

### Spam Protection

Cisco defends against spam with a preventive layer of reputation filters, followed by reactive filters.

**Cisco IronPort Reputation Filters** provide an outer layer of defense using Cisco SenderBase® data to perform a real-time email traffic threat assessment and identify suspicious email senders.

**Cisco IronPort Anti-Spam** uses the industry's most innovative approach to threat detection, based on a unique Context Adaptive Scanning Engine (CASE). Cisco IronPort CASE examines the complete context of a message, including: **what** content the message contains, **how** the message is constructed, **who** is sending the message, and **where** the call to action of the message takes you. By combining these elements, Cisco IronPort Anti-Spam stops the broadest range of threats with industry-leading accuracy.

**Cisco IronPort Spam Quarantine** is a self-service end-user solution, with an easy-to-use web- or email-based interface. This feature provides end users with their own safe holding area for spam messages and integrates seamlessly with existing directory and mail systems.

## **Virus Protection**

**Cisco IronPort Outbreak Filters** identify and stop viruses hours before traditional virus signatures are available.

**Sophos Anti-Virus** technology provides a fully integrated second layer of virus protection with the highest-performing virus scanning technology in the industry.

**McAfee Anti-Virus** technology provides an additional layer of protection (either in conjunction with, or as an alternative to, Sophos) for maximum security.

## **Data Loss Prevention**

**Integrated data loss prevention (DLP)** is provided with RSA Email DLP. Cisco has partnered with RSA, the leader in DLP technology, to enable RSA Email DLP on Cisco IronPort email security appliances. RSA Email DLP offers easy management, comprehensive protection, and unparalleled accuracy to help organizations ensure compliance with industry and government regulations worldwide and prevent confidential data from leaving customer networks.

**Cisco IronPort Email Encryption** gives administrators the ability to secure confidential data and comply with partner, customer, or regulatory requirements. This technology enables simple, secure communication from the gateway to any recipient inbox, while TLS, PGP, and S/MIME technology provide security between partner email gateways.

**Cisco IronPort Compliance Quarantine** provides delegated access to emails that have been flagged by the content scanning engine.

## **Email Authentication**

**DomainKeys Identified Mail (DKIM) and DomainKeys verification and signing** digitally process messages to establish and protect identities with email senders and receivers on the Internet.

**Cisco IronPort Bounce Verification** tags messages with a digital watermark to enable filtering of bounce attacks at the network edge.

**Cisco IronPort Directory Harvest Attack Prevention** tracks spammers who send to invalid recipients and blocks attempts to steal email directory information.

## **Enterprise Management Tools**

**Cisco IronPort Email Security Manager** is a powerful graphical management tool that yields fingertip control to manage all security - including preventive and reactive antispam and antivirus filters, email encryption, and content filtering.

**An intuitive GUI** enables unprecedented visibility and control. The integrated web-based user interface enables real-time and historical reporting along with the ability to configure policies, search, and selectively release quarantined messages.

**Centralized management** eliminates a single point of failure and makes managing multibox installations of Cisco IronPort email security appliances simple. The ability to manage configuration at multiple levels allows organizations to manage globally while complying with local policies.

**Cisco IronPort Email Security Monitor** delivers real-time threat monitoring and reporting. This technology tracks every system connecting to the Cisco IronPort appliance to identify Internet threats (such as spam, viruses, and DoS attacks), monitor internal user trends, and highlight compliance violations.

**SNMP Enterprise MIB** facilitates hands-off monitoring and alerting for all system parameters, including hardware, security, performance, and availability.

## Benefits

### Unprecedented Insight

Cisco IronPort technology demonstrates return on investment through sophisticated management, monitoring, and reporting tools. Each appliance has a unique reporting system, providing both a real-time and historical look at mail flowing through an organization's email infrastructure. These tools provide system administrators with the necessary information to make critical security decisions.

**Figure 1.** The Cisco IronPort C370 Integrates Easily Into Existing Messaging Infrastructures - Delivering In-Depth Security with Carrier-Proven Technology and the Management Capabilities Required by Large Enterprises and ISPs

### Reduced Administrative Burden

The Cisco IronPort C370 uses the industry's most advanced technology to deal with threats and anomalies in a fully automated manner. This allows highly skilled IT staff to focus on other problems and leave the email issues to Cisco.

### Lower TCO

The Cisco IronPort MTA platform enables a massive reduction in cost by consolidating email operations and security into a single platform. Self-managing security services provide the lowest-maintenance solution in the industry, with minimal configuration requirements.

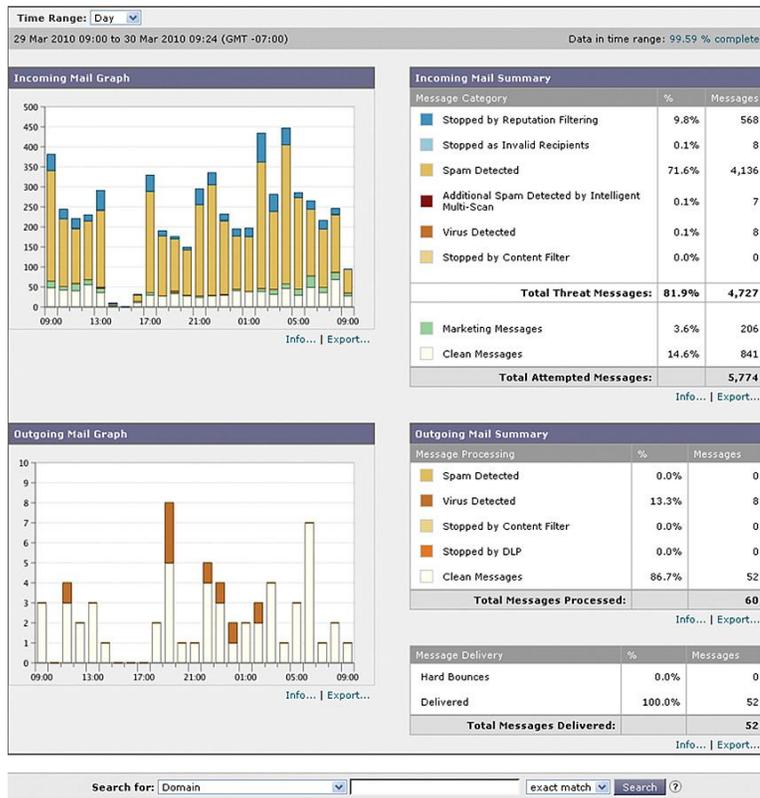

### Increased End-User Productivity

By securing the network at the gateway level, the Cisco IronPort C370 acts as a "shock absorber" in front of the groupware server(s). This helps ensure that end users are not bogged down by spam, viruses, and other threats. Unlike other solutions, Cisco security services do not rely on end users to "train" the system. Instead, high accuracy is maintained through continuous and automatic rule updates.

### Improved Network Efficiency

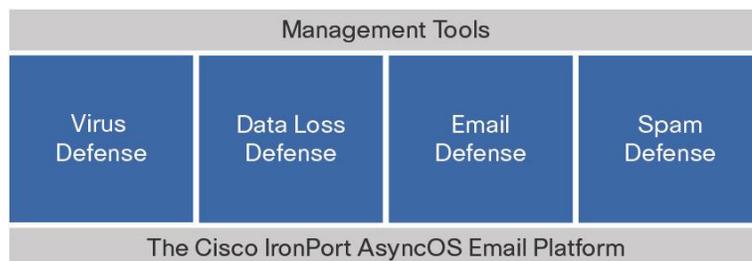

The Cisco IronPort Reputation Filtering system was the first in the industry and remains the most sophisticated. In its default settings. The system will block more than 80 percent of incoming mail at the connection level. By eliminating these unwanted messages, companies save bandwidth (the message is never accepted) and system resources. CPU-intensive spam and virus filters are only used when needed, and rate limiting is an effective defense against "hit and run" spam or DoS attacks.

**Figure 2.** The Email Security Monitor's Intuitive Graphical User Interface Enables Real-Time and Historical Visibility Into Email Traffic

Today's email-borne threats consist of virus attacks, spam, false positives, DDoS attacks, directory harvest attacks, phishing (fraud), data loss, and more. The Cisco IronPort C370 addresses the issues faced by medium-sized enterprises and satellite offices by uniquely combining powerful performance with preventive and reactive security measures that are easy to deploy and manage.

## Specifications

Chassis/Processor	
<b>Form Factor</b>	19-in. rack-mountable, 2 RU height
<b>Dimensions (H x W x D)</b>	3.4 x 17.4 x 26.8 in.
<b>CPU</b>	One Intel multicore processor
<b>Power Supplies</b>	Hot-plug redundant, 750W, 100/240V
Storage	
<b>RAID</b>	RAID 1+ 0 configuration; dual-channel hardware with battery-backed cache
<b>Drives</b>	Two hot-swappable, 300 GB serial attached SCSI
<b>Capacity</b>	35 GB effective queue capacity
Connectivity	
<b>Ethernet</b>	Four Gigabit Ethernet ports
<b>Serial</b>	One RS-232 (DB-9) serial port
Mail Operations	
<b>Mail Injection Protocols</b>	SMTP, ESMTP, Secure SMTP over TLS
<b>DNS</b>	Internal resolver/cache; can resolve using local DNS or Internet root servers
<b>LDAP</b>	Integrates with Active Directory, Notes, Domino, and Open LDAP servers
Interfaces/Configuration	
<b>Web Interface</b>	Accessible by HTTP or HTTPS
<b>Command Line Interface</b>	Accessible via SSH or Telnet; Configuration Wizard or command-based
<b>File Transfer</b>	SCP or FTP
<b>Programmatic Monitoring</b>	XML over HTTP(S)
<b>Configuration Files</b>	XML-based configuration files archived or transferred to cluster
Cryptographic Algorithms	
<b>TLS (Encrypted SMTP)</b>	56-bit DES, 168-bit 3DES, 128-bit RC4, 128-bit AES, and 256-bit-AES
<b>DomainKeys Signing</b>	512-, 768-, 1024-, 1536-, and 2048-bit RSA
<b>SSH for System Management</b>	768- and 1024-bit RSA
<b>HTTPS for System Management</b>	RC4-SHA and RC4-MD5

## Product Line

### Sizing Up Your Email Security Solution

Cisco provides industry-leading email security products for organizations ranging from small businesses to the Global 2000.

<b>Cisco IronPort X1070</b>	For the most demanding networks in the world
<b>Cisco IronPort C670</b>	For large enterprises and service providers
<b>Cisco IronPort C370</b>	For medium-sized and large enterprises
<b>Cisco IronPort C370D</b>	For any company with unique outbound email communication needs
<b>Cisco IronPort C160</b>	An affordable and easy to use all-in-one appliance for small to medium-sized enterprises

---

## Summary

### Industrial-Strength Email Security

Cisco IronPort offers the most sophisticated email security system available today. In production at 8 of the 10 largest ISPs and at more than 40 percent of the world's largest enterprises, Cisco IronPort email security appliances have a demonstrated record of unparalleled security and reliability.

This same code base that powers Cisco's most sophisticated customers is also available in the Cisco IronPort C370 Email Security Appliance, helping to protect the email systems of medium-sized enterprises and satellite offices. By reducing the downtime associated with spam, viruses, and a wide variety of other threats, the Cisco IronPort C370 enables the administration of corporate mail systems, reduces the burden on technical staff, and quickly pays for itself. The advanced technology within the appliance leads to the simplicity of management - and the highest levels of security in the world. Cisco IronPort email security appliances support and protect email systems not only from today's threats, but also from those certain to evolve in the future.
