

Your benefits

- No initial investments; calculable costs with monthly billing
- Hardware-independent service
- Easy deployment, setup, auto-discovery
- SLA policy automation
- Local and off-site backups with indevis as replication target
- Scale-out backup and archive with integrated DR functions
- Central management – edge and in the cloud
- Reporting for compliance requirements

BACKUP-AS-A-SERVICE INDEVIS HYBRID BACKUP: RESTORE IN SECONDS

There are many sources of risk that can cause valuable corporate data to be lost. The provisioning and restoration of data within the context of modern emergency measures are subject to expensive and protracted processes. For this reason, it is important to protect the data in such a way that the data is not only securely stored, but that it can also be restored without any changes and within the specified timeframes. Conventional backup methods and transfer to tape quickly reach their limits in regard to security, management and speed. This situation is compounded by increasing volumes of data, which make future and necessary media changes (e.g. tape migrations) difficult or even impossible.

BACKUP-AS-A-SERVICE

indevis Hybrid Backup enables you to securely and cost-effectively move your data without modifications to highly modern, convergent backup destinations in the indevis datacenter. The *indevis Hybrid Backup* service is a cloud-based, failsafe backup and recovery service. *indevis Hybrid Backup* is provisioned through the ultra-modern indevis cloud to augment and extend your existing backup infrastructure with additional functionality and a further highly-secure replication destination in a German datacenter.

CHALLENGES FACING A MODERN BACKUP SYSTEM

Business challenges	Technical challenges
• Next-Generation datacenter initiatives	• Increasing data volumes
• Datacenter transformation – migration of data	• Growing complexity of data backups
• Private, hybrid and public cloud initiatives	• Safeguarding of data integrity
• Increasing costs for backup archives and disaster recovery	• Examination of data availability
• Personnel requirements and planning – ‚always on‘	• Transfer of the data – off-site backup / emergency provisioning
• Acquisition of knowledge and know-how transfer	• Fast searches and recovery
• Time management – problem and incident troubleshooting	• Compliance with legal requirements
• Merger & acquisitions	• Technology exchange / extensions

DOUBLE PROTECTION AND SYSTEM LOAD RELIEF

indevis Hybrid Backup uses your existing infrastructure. Communication with the indevis backup, replication or archive destinations is safeguarded by the additional integration of a virtual backup appliance. *indevis Hybrid Backup* backs up in virtual environments without the need for backup agents, and therefore makes no changes to your existing environment. For this reason, *indevis Hybrid Backup* can be the ideal supplement to the emergency management for your current data backup solution.

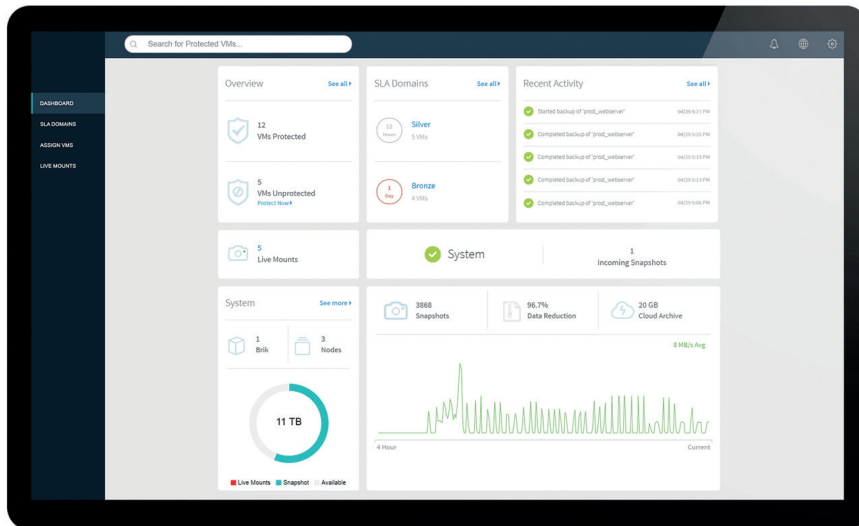

HIGH SECURITY STANDARDS

The replication destination is located in the indevis datacenter in Munich. The data can be transferred in encrypted format. The *indevis Hybrid Backup* platform is a powerful, convergent backup and data management platform for the backup of virtual servers. The indevis backup appliances have redundant power, network components, fans, SSD and HDD storage capacities as well as suitable mechanisms for early detection and prevention of memory errors. Your data is comprehensively protected against loss and destruction as a consequence.

FAST BACKUP – FAST RECOVERY

The scalable *indevis Hybrid Backup* service helps you to reduce your administration complexity. The backup policies are set up using modern SLA guidelines and are completely transparent to all backup destinations. The integrated search functions allow you to quickly review replication targets and easily recover individual folders and/or files without placing additional demand on your in-house infrastructure. Thanks to the included cloud data management you always have a clear overview and control over your internal and external databases.

ENDLESS POSSIBILITIES

Upgrade your data backup and disaster prevention to the highest standards. *indevis Hybrid Backup* can be flexibly configured and adapted to your requirements. Start with a single, business-critical application and grow over time into our optional indevis Cloud Storage as a long-term storage solution. In combination with automatic and transparent data tiering, we can offer you new and competitively-priced options.

Do you want to know more about the functions of *indevis Hybrid Backup* to see for yourself what the service can do? Just ask us for a non-binding offer – we would be delighted to advise you.

About indevis GmbH

Since 1999 indevis GmbH, ISO 27001 certified, has been providing IT security, datacenter and network solutions, accompanied by professional consulting, management and support services. In doing so, indevis fully meets the demands and requirements set out by the economic sector and public authorities and higher education institutions.

As one of Germany's leading managed security service providers, indevis is the partner for IT security and network technology for companies of all sizes and in any sector – after all, IT security is not a given, but rather has to be strategically planned.

indevis offices are located in two cities in Germany: Munich and Hamburg. Additional staff members work at a number of other locations distributed throughout Germany.
